DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 3, and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bladh, US Patent 4,686,738, in view of Gretz, US Patent 6,143,982. Bladh provides a water-preventing grommet 6 adapted to connect to a tube, including a body with abutting end and an inclined end 12, as claimed. A recess is provided in communication with a downward passage, as claimed. Bladh discloses the claimed invention except (1) a c-shaped flange, as claimed, and (2) a flat distal face.

Regarding (1), Gretz teaches a c-shaped flange part allowing for ease of insertion of the grommet end. It would have been obvious at the time the invention was made for one skilled in the art to have included in the design of Bladh such a modification, similar to that taught by Gretz, for the purpose of providing means for ease of insertion of the grommet.

Application/Control Number: 10/796,076 Page 3

Art Unit: 3676

Regarding (2), it would have been an obvious matter of design choice to make the different portions of the device of whatever form or shape was desired or expedient. A change in form or shape is generally recognized as being within the level of ordinary skill in the art, absent any showing of unexpected results. *In re Dailey et al.*, 149 USPQ 47. Such a modification is not critical to the design and would have produced no unexpected results.

- 3. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Blahd in view of Gretz. Although the combination does not explicitly teach an o-ring, the examiner serves Official Notice that it is a common practice in the art of grommet and bushings to use an o-ring as a means for providing additional sealing structure. It would have been obvious at the time the invention was made to include such a modification in the device of the combination, for the purpose of providing additional sealing structure.
- 4. Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bladh in view of Gretz in further view of Korman, US Patent 3,984,168. Although the combination does not explicitly teach multiple ribs as claimed, such structure is

Art Unit: 3676

very old and well known in the art. Korman teaches such structure for providing means for gripping the outer surface. It would have been obvious to have modified the device in this way, for the purpose of providing means for gripping the outer surface of the grommet.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark A. Williams whose telephone number is (703) 305-3438. The examiner can normally be reached on Monday through Friday.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
